

How do you import CD tracks into Protools?

Place CD in tower (to open the drive, press the eject button on the keyboard - upper right hand corner)

In Pro-tools:

Go to Movie

Import audio from other movie

Select the CD from the menu

Select the track you would like to import

Go to options to select the section you would like to import

Save to your folder

Import movie

Pro-tools should then ask whether you would like to import as a mono or stereo file.
